KEY:

- New trees
- New grass areas
- New ramps
- Car Park / Access road
- New pathways
- New play area
- New plaza entrance
- Building canopy
- Tree to be removed
- Weldmesh fence
- Picket fence
- Railings

The proposed new single storey Nursery building has been positioned on the site of the existing cycle shelter and grassed area, to the front the school. The existing cycle shelter would be relocated nearer to the reception entrance area to the main school building.

A new car parking area for staff and visitors to the Nursery is positioned at the front of the site.

The proposed new single storey Classroom building is located to the rear of the site, to then allow for the removal of the existing temporary Classrooms.

Proposed Floor Plan - New Nursery Building

Birds Eye View of Proposed New Nursery

The design for the new Nursery building provides a safe entrance to the front of the building, with a secure play area for Nursery children to the rear. Provision has been made for 6 parking spaces, cycle and buggy storage and an external pump house. Photovoltaic (PV) panels are included on the roof.

The building form has been designed to be efficient and allows for a safe entrance lobby into the main central circulation spine. From this area, the two play spaces can be accessed and all utility spaces can be safely accessed away from the children's activities.

The precedent image to the left is a Nursery that the architects have recently designed. This indicates our proposal to overhang the roof to provide a continuous canopy over the external play area. This elevation also has floor to ceiling glazing along the entire facade.

The precedent image to the left indicates our proposed facade treatment of solid laminate panels. The pattern of the facade provides a playful rhythm of colours reflecting the surrounding natural landscape. A colour scheme has been indicated, but the final choice will be subject to feedback from the consultation process

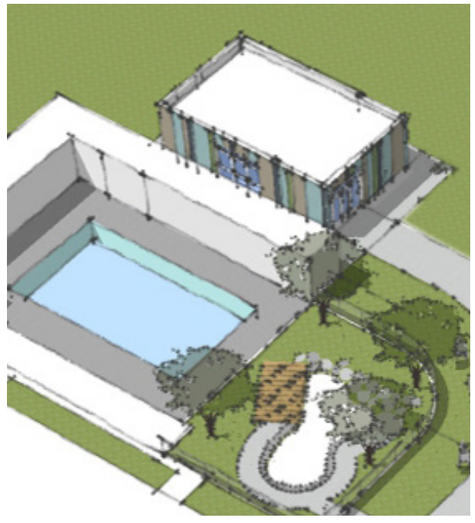
Classroom Elevation to Sports Pitch

Classroom Elevation to Sports Pitch



The design for the new single storey Classroom building is similar in form and style to the Nursery building. The external facade is faced with the same coloured, solid laminate panels.

The Classroom building is positioned on the southern edge of the sports pitch, adjacent to the swimming pool. This will allow the existing temporary Classroom buildings to be demolished, once the new Classroom has been built.

The primary route to the main entrance to the Classroom is via the playground of the main school.
